WEB DEVELOPMENT SEMESTER PROJECT

STUDENT STUDY PLANNER

Organize your subjects. Plan your study. Track your progress.

Submitted by: Abhishek Hiware
Course: B.Tech – First Year
Department: School of Technology
Technologies: HTML5, CSS3 and JavaScript

Introduction

Student Study Planner is a web-based application designed to help students organize their academic activities in one place. It provides a simple and structured platform to manage subjects, plan study sessions, track assignments and monitor task completion.

Problem Statement

Students often have to manage multiple subjects, assignments, examinations and study schedules simultaneously. Without proper organization, they may find it difficult to prioritize tasks and keep track of deadlines. This project aims to provide a centralized platform that makes academic planning and task management easier and more organized.

Project Objectives

- To help students organize their academic tasks efficiently.
- To make study planning easier through a weekly schedule.
- To help students keep track of assignments and upcoming deadlines.
- To encourage consistent study habits through progress tracking.

Target Users

The primary target users are school and college students who want a simple digital platform to organize their subjects, assignments, study sessions and academic schedules.

Main Features

1. **Dashboard:** Displays daily tasks, pending activities and upcoming deadlines.
2. **Subject Management:** Organizes study tasks according to different subjects.
3. **Task Management:** Allows users to add, edit and delete study tasks with deadlines and priority levels.
4. **Weekly Study Planner:** Provides a weekly view of planned study activities.
5. **Task Tracking:** Allows users to mark tasks as completed or pending.
6. **Progress Overview:** Displays completed and pending tasks to help students monitor their progress.

Technologies & Expected Outcome

HTML5: For creating the structure and content of the website.
CSS3: For designing the layout and making the website responsive.
JavaScript: For implementing interactive features and task management.

Expected Outcome: The expected outcome is a user-friendly and responsive web application that helps students plan their academic activities, manage deadlines and track their study progress in an organized manner.
